ChatGPT Export

by NoXoZ.be · v7.0.0

Independent Brave / Chromium extension for structured export of conversations, Projects, and full ChatGPT accounts into Markdown archives.

1. Overview

v7.0.0

Validated v6.1.4 p24 base

Local only

No telemetry

Manifest V3

ChatGPT Export is an independent browser extension for Brave, Chrome, and other Chromium-based browsers. It converts ChatGPT conversations into structured, human-readable Markdown files, bundled into ZIP archives together with any files that were uploaded to, or offered by, the assistant during the conversation.

The extension is built to scale from a single conversation to an entire account history: it can export one chat, one complete Project, or every chat an account has ever produced, while keeping memory usage under control through sequential batching.

1.1 What's new in v7.0.0

v7.0.0 is the major-release baseline built from the validated **v6.1.4 p24** codebase. It is a stabilization and packaging release rather than a behavioral rewrite: it intentionally preserves everything that was already validated, and re-publishes it as a clean, documented v7 baseline. Specifically, it preserves:

- the *p24 project-source official-flow* fix, which corrects how Project-sourced chats are detected and routed during export;
- Full Project batching behavior, unchanged from v6.1.4;
- ALL Full Chat batching behavior, unchanged from v6.1.4;
- the existing Upload/Download file-retrieval workflow;
- the Mini / Maxi / Developer UI modes and their respective controls.

In practice, this means that any workflow, script, or habit built around v6.1.4 p24 continues to work identically under v7.0.0.

1.2 Who this extension is for

Use case	Why ChatGPT Export helps
Archiving personal or professional chat history	Produces a portable, offline, plain-text archive that does not depend on the ChatGPT web app remaining available.
Migrating knowledge out of ChatGPT Projects	Exports an entire Project — every chat, every uploaded/downloaded file — into one indexed ZIP.
Full account backup	ALL Full Chat walks every chat in the account and produces a complete, batched Markdown archive.
Feeding conversations into other tools	Markdown output is easy to search, diff, version-control, or import into note-taking and documentation tools.
Compliance / record-keeping	Local-only processing means exported content never transits through a third-party backend.

2. Installation

Installation is identical across Chromium-based browsers; only the extensions-page URL changes.

Step	Brave	Chrome / Chromium
1	Extract the distributed ZIP archive to a folder you control.	
2	<code>brave://extensions/</code>	<code>chrome://extensions/</code>
3	Enable Developer mode (top-right toggle).	
4	Click Load unpacked .	
5	Select the extracted folder containing <code>manifest.json</code> .	
6	Open or reload a ChatGPT tab.	

Because this is a source-available extension distributed outside the Chrome Web Store, it must be loaded as an **unpacked** extension with Developer mode enabled. This is expected and does not indicate a corrupted package.

Runtime files

```
manifest.json
background.js
content-export.js
donate-mini.js
export-style.css
icons/
```

3. Core concepts

3.1 Export modes: FULL, START, END, ALL

Mode	Scope	Message-range aware?
FULL	The entire current chat, from first to last message.	No — always complete.
START	The current chat, limited to the first <i>N</i> messages.	Yes — uses <code>#MSG</code> / <code>Number of messages to export</code> .
END	The current chat, limited to the last <i>N</i> messages.	Yes — uses <code>#MSG</code> / <code>Number of messages to export</code> .
PROJECT	Every chat inside the current ChatGPT Project.	No — always FULL per chat; batched by <code>#inZip</code> .
ALL	Every chat in the account.	No — always FULL per chat; batched by <code>#inZip</code> .

START and END are only meaningful for a single current-chat export. They have no effect on PROJECT or ALL exports, which always process each chat in FULL.

3.2 Message count vs. chat batching

These two controls look similar but govern completely different things, and mixing them up is the most common source of confusion:

- **Number of messages to export** / `#MSG` — a message-level limit, used only by START and END modes on a single chat.
- **Number of chats to export per ZIP** / `#inZip` — a chat-level batching limit, used only by PROJECT and ALL exports, to decide how many whole chats go into each ZIP file.

Neither control ever partially truncates a chat inside a PROJECT or ALL export: batching always operates on whole chats.

4. Interface tour

4.1 Maxi mode

Maxi mode exposes every control with a full-length label, intended for occasional or first-time use.

Control	Role
Number of messages to export	Message count used by START and END modes.
Number of chats to export per ZIP	Maximum chats per ZIP for ALL Full Chat / Full Project.
Export Full Project	Exports the complete active Project.
Export Uploaded Files	Includes user-uploaded files in the export.
Export Downloaded Files	Includes assistant-offered files in the export.
Export Full Chat	Exports the current chat in full.
Export From Start	Exports from the beginning, limited by message count.
Export From End	Exports from the end, limited by message count.
Export ALL Full Chat	Exports every chat in the account.
Start Export	Launches the export with the currently selected options.
Click to Support This Project	Opens the Stripe donation page in a new tab.

4.2 Mini mode

Mini mode is a compact layout for repeated, fast exports once the workflow is familiar.

Control	Maxi equivalent
#MSG	Number of messages to export (START / END)
#inZip	Number of chats to export per ZIP
FULL / START / END	Export mode for the current chat
PROJECT	Export Full Project
ALL	Export ALL Full Chat
UPLOAD FILES / DOWNLOAD FILES	File retrieval toggles
Start Export	Launches the export
Support This Project	Opens the Stripe donation page

Blue controls are enabled/selected; gray controls are disabled/not selected.

4.3 Developer mode

Developer mode surfaces the same export engine with additional diagnostic detail intended for troubleshooting, such as batch progress, per-chat processing status, and any file-retrieval rejections (see Section 7 on download validation). It does not change the underlying export behavior described in this guide.

5. Batching — Full Project

A Full Project export is processed **sequentially, in batches**. If a Project contains 12 chats and `#inZip` is set to 5, the extension produces three ZIP files containing 5, 5, and 2 chats respectively.

Each batch returns to the starting ChatGPT page and is **finalized before the next batch begins**. This bounds the browser's peak memory usage regardless of how large the Project is, and means a failure late in a large export does not invalidate batches already completed.

Every batch is self-contained: it ships its own `INDEX.md` listing the chats it contains, and each chat keeps its own `Upload/` and `Download/` folders alongside its Markdown file.

6. Batching — ALL Full Chat

`ALL Full Chat` uses the same batch-size control as Full Project (`#inZip`). It always exports each selected chat in **FULL** mode — Start/End message-range controls do not apply.

Example: an account with 1,247 chats and `#inZip = 50` produces 25 ZIP files, the last one containing the remainder.

Account name in ZIP filenames

When the account name is available from the active ChatGPT session, it is included in the filenames of an ALL Full Chat export. A safe fallback name is used if the account name cannot be resolved (for example, if the session identifier is unavailable at export time).

```
Export ALL Full Chat - AccountName__export_YYYY-MM-DD-HH-MM-SS__part-001-of-025.zip
```

7. File export (Upload / Download)

Export Uploaded Files and **Export Downloaded Files** are independent toggles that can be combined freely with any export mode:

- **Uploaded files** are the files a user attached to the conversation (images, documents, spreadsheets, etc.). When enabled, retrievable bytes are copied into each chat's **Upload/** folder.
- **Downloaded files** are files the assistant generated or offered during the conversation (documents, code files, images, and similar outputs). When enabled, retrievable bytes are copied into each chat's **Download/** folder.

The chat Markdown itself is always produced regardless of these two toggles; they only control whether binary attachments are additionally retrieved.

Some assistant-offered files are served as short-lived, signed URLs. If a link has expired by the time the export runs, that specific file is skipped and noted as unavailable in the export log; the surrounding Markdown transcript is unaffected.

Download validation

The exporter rejects generic ChatGPT HTML viewer pages when a real, non-HTML file is expected. This prevents a page viewer from being incorrectly saved as a Markdown, ZIP, PDF, image, or other generated file — a failure mode that can otherwise silently corrupt an export's file inventory.

8. Naming conventions & folder structure

Full Chat export

```
ChatName__export_YYYY-MM-DD-HH-MM-SS.zip
├─ ChatName__export_YYYY-MM-DD-HH-MM-SS/
│  └─ ChatName__export_YYYY-MM-DD-HH-MM-SS.md
│     └─ Upload/
│        └─ Download/
```

ALL Full Chat export

```
Export ALL Full Chat - AccountName__export_...__part-001-of-025.zip
├─ INDEX.md
├─ Chat 001/
│  └─ Chat 001__export_...md
│     └─ Upload/
│        └─ Download/
├─ Chat 002/
│  └─ Chat 002__export_...md
```

```
| |— Upload/  
| |— Download/  
|— ...
```

Full Project export

```
Full Project - ProjectName__export_YYYY-MM-DD-HH-MM-SS.zip  
|— INDEX.md  
|— Project - ProjectName - Chat01__export_.../  
|   |— Project - ProjectName - Chat01__export_....md  
|   |— Upload/  
|   |— Download/  
|— Project - ProjectName - Chat02__export_.../  
|   |— Project - ProjectName - Chat02__export_....md  
|   |— Upload/  
|   |— Download/
```

9. Permissions & data access

The extension declares the minimum Manifest V3 permission set required to read the active ChatGPT tab and save files locally. No permission is used for any purpose beyond export.

Permission	Why it is needed
<code>activeTab</code>	Read the content of the ChatGPT tab the user is currently viewing, only when the user interacts with the extension.
<code>downloads</code>	Save the generated ZIP archives to the browser's Downloads location.
<code>scripting</code>	Inject the export logic into the active ChatGPT page to read rendered conversation content.
<code>storage</code>	Persist local UI preferences (selected mode, last-used <code>#MSG</code> / <code>#inZip</code> values) between sessions.
<code>tabs</code>	Identify and navigate between ChatGPT tabs/pages during multi-batch PROJECT and ALL exports.
<code>offscreen</code>	Perform ZIP archive assembly off the visible page context.

Host permissions

Host	Purpose
<code>https://chatgpt.com/*</code>	Primary ChatGPT web application.
<code>https://chat.openai.com/*</code>	Legacy ChatGPT domain, still used by some sessions.
<code>https://*.oaiusercontent.com/*</code>	Hosting domain for user-uploaded and assistant-generated file content.
<code>https://*.openai.com/*</code>	Supporting OpenAI-hosted resources referenced by the ChatGPT web app.
<code>https://*.blob.core.windows.net/*</code>	Azure Blob Storage endpoints used by ChatGPT to serve certain uploaded/generated files.

No host permission outside the ChatGPT/OpenAI file-serving domains listed above is requested. The extension cannot read or act on any other website.

10. Privacy & security summary

Full detail is available in `PRIVACY.md` and `SECURITY.md`; the key points are:

- All processing happens locally, in the browser — there is no NoXoZ.be export backend.
- No analytics SDK and no telemetry endpoint are included.

- Exported content is never intentionally transmitted to a NoXoZ.be service.
- The only external network call the extension initiates outside ChatGPT/OpenAI domains is the optional, user-triggered Stripe donation link.
- Exported ZIP archives can contain confidential information; storing and sharing them securely is the user's responsibility.

11. Worked examples

Scenario	Chats	#inZip	Result
Small Project	5	5	1 ZIP: 5 chats
Medium Project	12	5	3 ZIPs: 5 + 5 + 2 chats
Slightly uneven split	13	5	3 ZIPs: 5 + 5 + 3 chats
Large personal account	1,247	50	25 ZIPs, last one containing 47 chats
Conservative batching on a low-memory device	300	10	30 ZIPs of 10 chats each

As a rule of thumb: lower **#inZip** values trade a larger number of output files for lower peak memory usage and better resilience to interruptions during very large exports.

12. Recommended workflows

Archiving a single important conversation

Open the chat → Maxi or Mini mode → **Export Full Chat** (FULL) → enable both file options if attachments matter → **Start Export**.

Migrating a ChatGPT Project

Open any chat inside the Project → set a moderate **#inZip** (e.g. 5–10) → **Export Full Project** → keep the resulting ZIP batches together, since **INDEX.md** in each batch only lists that batch's chats.

Full account backup

Set **#inZip** based on account size (see Section 11) → **Export ALL Full Chat** → let the sequential batching run to completion without switching tabs, since PROJECT/ALL exports navigate between chats automatically.

13. Troubleshooting

Symptom	Likely cause	Suggested action
Extension icon/panel does not appear	Developer mode not enabled, or extension not loaded	Re-check the installation steps in Section 2
Nothing gets exported after clicking Start Export	Content script not yet injected into the current tab	Reload the ChatGPT tab after installing or updating the extension
Export stalls partway through a large ALL export	Peak memory pressure from a large batch size	Lower <code>#inZip</code> and re-run; completed batches remain valid
An expected uploaded/downloaded file is missing	Signed URL expired, or file rejected by download validation	Re-open the chat to refresh links, then re-export; see Section 7
ZIP filename does not include the account name	Account/session name could not be resolved at export time	Expected fallback behavior — the export itself is unaffected
Browser becomes unresponsive during ALL export	Batch size too large for the device	Reduce <code>#inZip</code> substantially (e.g. to 5–10) and retry

14. Frequently asked questions

Does ChatGPT Export send my conversations anywhere?

No. All processing is local to the browser. See Section 10 and `PRIVACY.md`.

Can I limit how many messages a Full Project or ALL export includes?

No. PROJECT and ALL exports always process each chat in FULL; message-count limits only apply to a single current-chat START/END export.

What happens if my browser closes mid-export?

Batches already finalized before the interruption remain valid, complete ZIP files. Only the in-progress batch at the moment of interruption is lost and needs to be re-run.

Can I use this extension on a work or managed ChatGPT account?

Technically yes, but organizational policies may restrict unpacked/developer-mode extensions or the export of company data. Confirm with your organization before use — see Section 9 (User Responsibility) of the LICENSE.

Is the extension available on the Chrome Web Store?

No. Per the NoXoZ Personal License v1.0, the Software is not published to any browser store; it is distributed only from the official repository (Section 17).

Can I modify the extension for my own use?

The license grants a personal, non-commercial use right for the official, unmodified release. Modification, redistribution, and publishing derivative versions are not permitted without written authorization — see [LICENSE](#), Section 5.

15. Known limitations & roadmap notes

- Export speed and reliability depend on ChatGPT's own page-rendering performance, which the extension does not control.
- Assistant-offered files served through short-lived signed URLs must be retrieved before they expire; very old chats may have already-expired file links.
- Very large single chats (thousands of messages) can still be memory-intensive even in FULL mode, since batching operates at the chat level, not the message level, for PROJECT/ALL exports.
- Interface wording and layout may evolve between versions; this guide reflects v7.0.0 exactly as released.

16. Version history

Version	Description
v7.0.0	Major release baseline from v6.1.4 p24; preserves the validated <i>p24 project-source official-flow</i> fix and existing export behavior; consolidated documentation and packaging.
v6.1.4	Full Project respects the configured chats-per-ZIP value and finalizes each project batch independently. Existing ALL Full Chat batching is preserved. Introduced the p24 project-source official-flow fix.
v6.1.3	File-download handling fixes and attachment URL validation improvements.
v6.1.2	ALL Full Chat batching, account-aware ZIP names, and documentation updates.

17. Support & license summary

ChatGPT Export is free to use personally and non-commercially under the **NoXoZ Personal License v1.0**. Selling, redistributing, rebranding, publishing modified versions, or integrating the Software into another product is not permitted without written authorization from the Licensor. Full terms are in [LICENSE](#).

Voluntary support is welcome via the Stripe link in [DONATE.md](#); it does not unlock any additional feature.
